

The background features a complex arrangement of black and yellow lines of varying lengths and orientations, creating a sense of movement and structure. The lines are scattered across the upper and middle portions of the page, with some forming partial rectangular shapes and others being simple horizontal or vertical strokes. The overall aesthetic is clean and modern.

## Technical Information

# Exclusive technologies

La tecnologia 3D Tech consente di applicare differenti materie ceramiche, anche a spessore, in perfetta corrispondenza con la grafica sottostante, realizzata in digitale ad altissima definizione. Un processo produttivo rivoluzionario, che combina la matericità con l'estetica del prodotto, fino ad ottenere superfici dallo straordinario valore sensoriale.

The new 3D Tech technology allows thick layers of various ceramic materials to be applied in perfect alignment with the underlying graphic designs, which are created digitally with extremely high definition. This revolutionary production process combines material and aesthetic effects to create surfaces with extraordinary sensorial appeal.

## 3D tech

## SOFT 3D

La tecnologia SOFT 3D consente di realizzare lastre dalla finitura extra morbida arricchite da effetti di bassorilievo che ne esaltano la naturalezza. La differente densità delle materie utilizzate in superficie, nelle zone selezionate, ricrea chimicamente le profondità, che si sovrappongono in maniera esatta alla grafica digitale ad alta risoluzione.

The SOFT 3D technology allows to create slabs with an extra smooth finish, enriched with bas-relief effects that enhance the naturalness of the surface. The different density of the raw materials applied in the selected areas, chemically recreates the depths that exactly match the high-resolution digital graphic.

## Technical Information

# FULLBODY3D

Grazie ai più evoluti sistemi di miscelazione e pressatura degli impasti ceramici, FLAVIKER è in grado di ricreare la complessa struttura dei materiali lapidei. L'esclusiva tecnologia FULLBODY 3D permette di ottenere ciò che la natura ha creato nei millenni, riproducendo l'estetica delle pietre sia in superficie che nel corpo della lastra. La continuità tra massa, superficie e bordo delle lastre è garantita anche dopo le operazioni di taglio, foratura e rifinitura necessarie a ottenere il prodotto finito.

Flaviker uses the most advanced ceramic body mixing and pressing systems to recreate the complex structure of stone. Emulating the processes that occur in nature over millions of years, the unique FULLBODY 3D technology reproduces the aesthetics of stone both on the surface and within the body of the slab. This ensures seamless continuity between the body, the surface and the edge of the slabs even after cutting, drilling and finishing operations.

## P.tech

La tecnologia P.TECH migliora la resistenza allo scivolamento, pur mantenendo una piacevole sensazione al tatto. P.TECH è il risultato di un innovativo processo produttivo che coniuga la selezione delle materie prime con le fasi di pressatura, cottura e lavorazione a fine linea.

I prodotti P.TECH, R10 ed R11, pur raggiungendo i più elevati coefficienti di attrito, si puliscono facilmente, per questo possono essere utilizzati nei progetti wellness e outdoor, anche in aree pubbliche o commerciali.

The unique P.TECH technology improves slip resistance while maintaining a pleasant tactile sensation. P.TECH is the result of an innovative production process that combines a meticulous selection of raw materials with the pressing, firing and end-of-line processing stages.

Despite their high coefficient of friction, R10 and R11 P.TECH products are easy to clean, making them ideal not only for use on indoor floors but also in wellness and outdoor spaces in public or commercial areas.

## Technical Information

La versatilità delle superfici Flaviker si afferma anche dove si elevano i parametri di anti-scivolosità. Non solo per le aree outdoor, ma anche nelle zone wellness, per bordi piscina sia interni che esterni, la gamma offre numerose soluzioni in grado di rispondere ai requisiti tecnici imposti dalle norme vigenti. Gli articoli in finitura antiscivolo riproducono tutti gli effetti materici più rappresentativi dei prodotti "indoor", per creare, dove richiesto, una perfetta continuità con gli spazi coperti, sia a spessore tradizionale che a spessore maggiorato, tenendo conto di ogni esigenza e dei diversi sistemi di posa.

## No-Slip Surface

The versatility of Flaviker surfaces is also evident in their anti-slip properties. Suitable for outdoor spaces and for interior and exterior wellness areas and swimming pools, the range includes numerous solutions that meet the latest technical and performance standards. The non-slip surfaces are available with the same material effects as the most widely used indoor products in both conventional and extra-large thicknesses. This creates a sense of continuity between interior and exterior spaces while catering for all needs and installation systems.

INFORMAZIONI TECNICHE TECHNICAL DETAILS

POSA TRADIZIONALE  
TRADITIONAL INSTALLATION

La posa tradizionale è ideale per la realizzazione di pavimentazioni carrabili. Traditional installation is ideal for floorings that will be driven over by vehicles.

POSA A SECCO SU GHIAIA  
DRY INSTALLATION ON GRAVEL

La posa su ghiaia permette il perfetto drenaggio delle acque piovane. Installing on gravel enables perfect drainage of rainwater.

POSA A SECCO SU ERBA  
DRY INSTALLATION ON GRASS

La posa diretta su erba permette di creare percorsi e camminamenti integrandosi perfettamente nell'ambiente. Installing directly on top of grass enables the creation of paths and walkways that blend in perfectly with the surroundings.

POSA A SECCO SU SABBIA  
DRY INSTALLATION ON SAND

La posa su sabbia permette di creare percorsi e camminamenti per spiagge e stabilimenti balneari. Installing on top of sand is ideal for creating paths and walkways on beaches and beach bars.

POSA SOPRAELEVATA DA ESTERNO  
OUTDOOR RAISED LAYING SYSTEM

Il sistema di pavimentazione sopraelevata prevede l'utilizzo di supporti portanti di tipo autolivellante, regolabili oppure fissi che si adattano con semplicità e sicurezza ad ogni tipo di pavimento sottostante. Il sistema permette la realizzazione di piani di posa con altezze variabili, da terra, comprese fra 25 e 270 mm. L'indipendenza della pavimentazione dai supporti garantisce l'assorbimento di eventuali movimenti strutturali. Il sistema sopraelevato non necessita di massetto in cemento e consente una diminuzione del peso sulla struttura portante. Le fughe aperte tra una piastrina ed un'altra consentono un facile deflusso dell'acqua piovana evitando tutti i rischi di accumulo o di ristagno. La presenza dell'intercapedine fra il piano di calpestio e il piano di appoggio favorisce l'aerazione e l'isolamento termico. Questa soluzione permette inoltre il passaggio di impianti e tubazioni nell'intercapedine, e la facile ispezione degli stessi una volta installata la pavimentazione.

The raised floor system foresees the use of self-levelling, adjustable or fixed load bearing supports that easily adapt to the floor below in total safety. The system is suitable to create laying designs with variable heights from the ground, which range between 25 and 270 mm. The independence of the flooring from the supports guarantees the absorption of any structural movements. The raised system does not require a cement screed and reduces the load on the bearing structure. The open joints between the tiles allow rainwater to easily drain off, avoiding any risk of water accumulation or stagnation. The gap between the tread surface and the support surface favours ventilation and heat insulation. This solution allows for the installation of systems and piping in the gap, which can be easily inspected even once the floor has been installed.

Per informazioni sull'utilizzo dei supporti per pavimentazione sopraelevata, consultare il catalogo X20. To see more about the use of self-levelling for raised floor consult the X20 catalog.

## SOLUZIONI PER SUPERFICI CARRABILI URBANE E RESIDENZIALI DRIVE-OVER SURFACES SOLUTIONS FOR URBAN AND RESIDENTIAL SPACES

I prodotti X30, grazie allo spessore maggiorato di 30 mm, hanno le caratteristiche tecniche necessarie per la posa di tutte le situazioni carrabili in esterno, dagli spazi residenziali privati fino ai centri urbani. In caso di traffico leggero, come nei viali, nei cortili e nei parcheggi delle abitazioni, la pavimentazione può essere installata senza incollaggio. In questo caso il materiale si stende su una base di aggregati lapidei di varia granulometria compattati, avendo cura di utilizzare i comuni distanziatori in materiale plastico. Nelle zone sottoposte a traffico elevato, come percorsi stradali e piazze cittadine, è invece necessario effettuare la posa su massetto cementizio con malta d'allettamento, seguendo procedimenti analoghi a quelli utilizzati per la posa dei materiali naturali.

With their extra-large 30 mm thickness, X30 slabs have the necessary technical characteristics for use in any outdoor vehicular application, from private residential areas to urban centres. For light traffic situations such as driveways, courtyards and residential parking spaces, the slabs can be installed without adhesive. In this case, they should be laid on a base of compacted stone aggregates of various sizes and positioned using ordinary plastic spacers. In heavy traffic areas such as roads and city squares, the slabs should be laid on a cement screed with bedding mortar following similar procedures to those used for the installation of natural materials.

## CONSIGLI PER LA POSA E LA PULIZIA / INSTALLATION AND CLEANING ADVICE

### AVVERTENZE GENERALI

Indipendentemente dal tipo di prodotto e formato scelto, prima di procedere con la posa è opportu-no fare una verifica sul cantiere per valutare le condizioni dei sottofondi. La posa richiede le migliori condizioni del sottofondo. Che dovrà sempre essere:

-asciutto e stagionato
-planare e privo di fessurazioni
-pulito, libero da polvere detriti o grumi di cemento
-compatto e resistente

La perfetta riuscita di un pavimento o di un rivestimento è il frutto della combinazione di molteplici fattori; per ottenere il migliore effetto estetico nella posa è opportuno ricordare che i prodotti FLAVIKER Group prevedono un numero variabile di pattern grafici, la cui successione all'interno delle scatole avviene in modo del tutto casuale.

### MOVIMENTAZIONE E POSA DELLE GRANDI LASTRE

Tutti i formati che superano i 100 cm di lunghezza e di larghezza devono essere maneggiati da 2 posatori. Per una corretta gestione delle lastre, a partire dalla fase di apertura degli imballi, è necessario avvalersi di dispositivi idonei. Per la movimentazione manuale e la successiva posa in opera è consigliato l'utilizzo di barre di movimentazione con ventose. E' opportuno effettuare le operazioni di taglio su una superficie piana, stabile e planare. E' consigliato l'utilizzo di guide da taglio professionali con carrello incisore. Il collante dev'essere applicato sia sul fondo di posa che sul retro delle lastre. Si consiglia l'utilizzo di adesivo in polvere a base cementizia a letto pieno di classe C2F (E) S1 /S2. Stendere il collante sulla superficie da rivestire con spatola a denti inclinati con dente minimo di 8mm con movimenti lineari e mai circolari, stendere il collante sul retro della lastra con spatola dentata mai inferiore a 5 mm (tenendo conto che la somma delle spatole utilizzate per sottofondo e lastra dev'essere compresa fra i 13 e i 14mm). Per far defluire le bolle d'aria che si possono formare fra la lastra e l'adesivo è consigliabile avvalersi di un battitore manuale in gomma o degli appositi dispositivi elettrici batti-piastrelle. La fuga minima consigliata, in relazione alla posizione dei giunti di dilatazione, è di 2 mm. Nel caso di pareti e pavimenti a contatto, da posare entrambi con lastre ceramiche, è indispensabile rispettare questa larghezza minima per garantire un perfetto risultato nel tempo. A rivestimento è possibile realizzare fughe inferiori in base alle opportune verifiche tecniche da effettuarsi sul cantiere. Le fughe dovranno essere riempite per almeno i 2/3 dello spessore con l'apposito sigillante, prestando attenzione all'eventuale presenza di residui di adesivo all'interno.

### POSA DEI PRODOTTI RETTIFICATI

Per raggiungere un effetto ottimale FLAVIKER suggerisce di mantenere almeno 1 o 2 mm di fuga per una posa mono-formato e 2 mm per combinare formati misti nelle pose modulari suggerite dai cataloghi.

### POSA DEI PRODOTTI NON RETTIFICATI

L'alto grado di greificazione delle piastrelle FLAVIKER comporta modeste tolleranze di calibro, pertanto nella posa dei prodotti a bordo naturale è consigliabile lasciare una fuga di almeno 3 mm fra le piastrelle.

### OPERAZIONI PRELIMINARI

Una volta scelto il materiale da posare, coerentemente con i requisiti tecnici, lo stile e la destinazione d'uso degli ambienti, è bene seguire alcune raccomandazioni prima di procedere con l'installazione.:
-stendere a terra almeno 3mq di prodotto per controllare l'effetto d'insieme, avendo cura di verifi-carne accuratamente calibro, tonalità e scelta.
-Specie nel caso di prodotti con elevata variabilità grafica, è bene posare il materiale attingendo da più scatole, le variazioni grafiche e cromatiche del prodotto sono una caratteristica qualificante che l'abilità del posatore può valorizzare, al contrario un prodotto posato senza tenerne conto può risultare esteticamente poco gradevole.
-È opportuno evitare di segnare la parte superiore delle piastrelle con matite o pennarelli e dedicare particolare attenzione ai prodotti lucidi, patinati o lappati che dovranno essere coperti durante i lavori di cantiere.
-Attendere 48/72 ore prima di sottoporre il pavimento al normale transito.

La posa senza fuga, soprattutto nei grandi formati è fortemente sconsigliata dai maggiori produttori di collante per i seguenti motivi:
Difficoltà di assorbimento di eventuali movimenti strutturali in assenza di elementi comprimibili
Diverso comportamento dilatometrico fra piastrelle e massetto, in presenza di elevate escursioni termiche
Difficoltà di realizzazione di una duratura ed efficace stuccatura
FLAVIKER sconsiglia assolutamente pose senza fuga, per le quali si declina ogni responsabilità.

Durante le operazioni di posa, nel caso venga scelto uno schema sfalsato, evitare di far coincidere i vertici di una piastrella con la metà delle altre a fianco. Soltanto i prodotti AUTO-LEVELING si prestano ad essere posati seguendo liberamente ogni schema di posa.

### GENERAL WARNINGS

Regardless of the chosenproduct type or size, an on-site inspection should be carried out prior to installation to assess the conditions of the substrates.Perfect substrate conditions are essential for a successful installation.Substrates must be:

-dry and properly cured
-flat and free of cracks
-clean and free of dust, debris or lumps of cement
-compact and strong

The success of a floor or wall tile installation is the result of a combination of multiple factors; to achieve the best possible aesthetic effect in installation, remember that FLAVIKER Group products come in a variable number of graphic patterns packed in boxes in a completely random sequence.

### SLAB HANDLING AND INSTALLATION

All slabs with length and width greater than 100 cm must be handled by 2 installers. Always use proper equipment to handle the slabs, from the unpacking stage onwards. For manual handling and installation, the use of handling bars with suction cups is recommended. Slabs should be cut on a flat, stable surface. Use professional cutting guides with a cutting slide. Adhesive must be applied to both the substrate and the back of the slab. The use of a Class C2F (E) S1/S2 cement-based full-bonding powder adhesive is recommended. Apply the adhesive to the surface using a slanted-notch trowel with a minimum notch size of 8 mm. Be sure to perform linear and not circular movements. Apply the adhesive to the back of the slab using a notched trowel with a minimum notch size of 5 mm. Note that the sum of the notch sizes of the trowels used for the slab and substrate must be 13-14 mm. Use either a rubber mallet or an electric tile vibrator to eliminate any bubbles that may form between the slab and the adhesive. Expansion joints between slabs should have a width of at least 2 mm. When ceramic slabs are installed on both the floors and walls, a minimum joint width of 2 mm must be left between the two surfaces to ensure perfect, trouble-free installation. A smaller joint width can be used on walls, subject to a technical assessment carried out on-site. The joints must be filled to at least 2/3 of their depth with grout, taking care to remove all adhesive from the joint first.

### INSTALLATION OF RECTIFIED-EDGED TILES

For optimal results, FLAVIKER recommends allowing a joint of at least 1 or 2 mm when laying same-sized tiles and 2 mm for different-sized tiles laid using the modular systems described in the catalogues.

### INSTALLATION OF NON-RECTIFIED TILES

The high degree of vitrification of FLAVIKER tiles means dimensional tolerances are low. Therefore, when laying tiles with natural press-formed edges, at least a 3mm joint should be allowed between each tile.

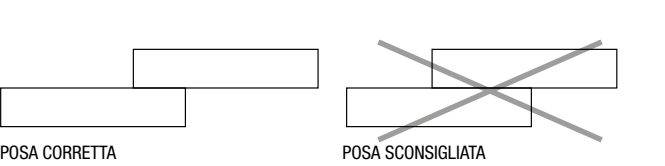

### PRELIMINARY OPERATIONS

It is advisable to follow some recommendations before proceeding with the installation of the selected tiling material, which should be carried out in compliance with the technical requirements, style and intended application;
-Place some tiles (at least 3 m²) over the flooring surface to check the final effect, making sure you have the right tile size, shade, and quality class.
-In the case of products whose graphics tend to differ considerably from one tile to the next, it is advisable to take the tiles from different boxes and mix them. The graphic and colour variations of the tiles are an important feature which can be enhanced by a skilled tile layer. Overlooking such features, on the contrary, may lead to poor aesthetic results.
-Avoid marking the front of the tiles with pencils or markers. Be particularly careful with glossy, matt or lapped tiles, which should be kept covered during building work.
-Wait 48/72 hours before walking over the newly laid tiles.

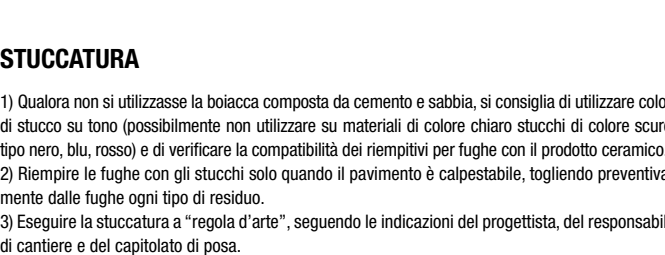

Jointless tile installation, particularly in the case of large-size tiles, is strongly advised against by most adhesive manufacturers for the following reasons:
Any structural adjustments may not be absorbed due to the lack of compressible material.
Wide temperature ranges may cause expansion effects between the tile and screed.
Effective, durable grout joints may be difficult to achieve.
FLAVIKER strongly advises against jointless tile installation and cannot be held liable for any damage deriving therefrom.

When laying tiles in a staggered pattern, make sure there are no tiles positioned with the corner coinciding with the centre of the adjacent tiles. Only AUTO-LEVELING products are suitable for all installation patterns.

## CONSIGLI PER LA POSA E LA PULIZIA / INSTALLATION AND CLEANING ADVICE

POSA CORRETTA

POSA SCONSIGLIATA

### STUCCATURA

1) Qualora non si utilizzasse la boiacca composta da cemento e sabbia, si consiglia di utilizzare colori di stucco su tono (possibilmente non utilizzare su materiali di colore chiaro stucchi di colore scuro, tipo nero, blu, rosso) e di verificare la compatibilità dei riempitivi per fughe con il prodotto ceramico.

2) Riempire le fughe con gli stucchi solo quando il pavimento è calpestabile, togliendo preventivamente dalle fughe ogni tipo di residuo.
3) Eseguire la stuccatura a “regola d’arte”, seguendo le indicazioni del progettista, del responsabile di cantiere e del capitolato di posa.
4) Stuccare piccole superfici per volta (4/5 mq) e asportare le quantità eccedenti con spugne o stracci umidi (di sola acqua pulita).
5) Stucchi cementizi non additivati: seguire attentamente le indicazioni dei fabbricanti, a fine giornata pulire i residui di posa con spugna appena bagnata.

6) Stucchi epossidici o additivati (con laticci, ecc.): seguire attentamente le indicazioni dei fabbricanti, perché il loro rapido indurimento può richiedere pulizie molto laboriose, specialmente se la superficie delle piastrelle è antiscivolo, ruvida o strutturata.

### LAVAGGIO DOPO LA POSA

Il lavaggio dopo la posa è una fase di fondamentale importanza per tutti gli interventi successivi e per la manutenzione. La pulizia di fine cantiere fatta con prodotti a base acida tamponati, quali ad esempio Deterdek di Fila o Cement Remover di Faber etc. va eseguita una sola volta e presenta l'ulteriore vantaggio di conferire uniformità cromatica alla superficie. Con il lavaggio acido dopo la posa si eliminano i residui di posa e il normale sporco di cantiere come: malta, colla, pittura, sporco da cantiere di varia natura. E' bene sapere che oltre il 90% delle contestazioni in cantiere è dovuto ad un cattivo, o addirittura inesistente, lavaggio con detergente acido dopo posa. Per evitare che un prodotto a base acida usato per la prima pulizia vada ad intaccare il riempimento a base cementizia delle fughe, è necessario, prima dell'operazione di pulizia, bagnare il pavimento affinché le fughe vengano impregnate e pertanto protette dall'azione corrosiva dell'acido stesso. È opportuno:
• Togliere con appositi detersgenti a base alcalina sostanze grasse o simili
• Procedere al lavaggio dopo la posa
• Risciacquare abbondantemente il pavimento, raccogliendo l’acqua residua.
• La pulizia si esegue dopo 4-5 giorni dalla stuccatura (lo stucco deve indurire) e non oltre i 10 giorni, oltre questi tempi la pulizia può diventare molto più laboriosa; attenersi scrupolosamente ai consigli riportati dal produttore di detersgenti.

Fare sempre test preventivi (su una piastrella non posata), in particolare per prodotti lappati o levigati.

### POSA E PULIZIA DI DECORI CON MATERIALI NATURALI

#### 3x30 CM. FASCIA SLATE ROSSO / SLATE NERO

I tozzetti che compongono il decoro sono ricavati, uno ad uno, dal taglio di lastre di ardesia di vari formati, ma sempre di spessore 10 mm. Trattandosi di “pietra naturale” determinate irregolarità di superficie e di spessore fanno parte del prodotto e ne sono caratteristica insopprimibile. La posa in opera va fatta utilizzando le normali colle ceramiche da mosaico, usando la tecnica della doppia spalmatura. Per la stuccatura usare esclusivamente stucchi epossidici, avendo cura di rimuovere l'eccedenza prima della completa essiccazione. La manutenzione e la pulizia vanno fatte utilizzan-do i normali prodotti per il marmo / pietre naturali reperibili sul mercato, evitando i prodotti abrasivi.

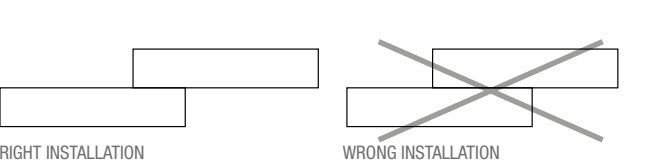

### POSA E PULIZIA DI MATITE ALLUMINIO

#### MATITE ALLUMINIO 0,5x120 cm

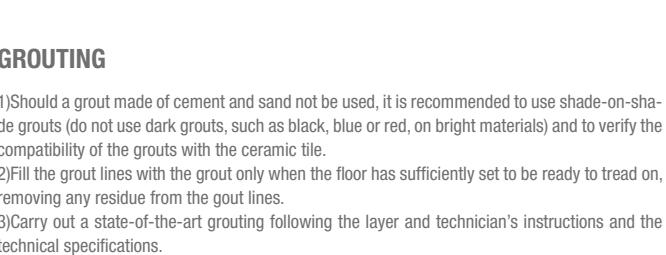

Articolo in Alluminio puro certificato e decorato con resine acriliche applicate manualmente o con bagno galvanico. Lievi differenze di tono e/o finitura sono caratteristiche del prodotto realizzato a mano.

POSA: utilizzare colle poliuretatiche o epossidiche. Durante la posa è necessario limitare il più possibile il contatto tra la colla e la parte superficiale della matita. Eventualmente pulire prontamente con acqua e spugna morbida l'eccesso di colla che va sulla parte in vista. Prestare attenzione durante la fase di stuccatura e pulire subito con acqua e spugna morbida. PULIZIA: si consiglia l'uso di un panno morbido con acqua e sapone neutro, alcool o detersgenti neutri per la casa (non acidi o basici).

NOTA: non utilizzare in nessun caso (posa, stuccatura e pulizia) prodotti abrasivi, acidi o basici, acetone, solventi e diluenti. Non applicare sulla parte decorata Scotch, nastri adesivi o simili.

RIGHT INSTALLATION

### GROUTING

1)Should a grout made of cement and sand not be used, it is recommended to use shade-on-shade grouts (do not use dark grouts, such as black, blue or red, on bright materials) and to verify the compatibility of the grouts with the ceramic tile.
2)Fill the grout lines with the grout only when the floor has sufficiently set to be ready to tread on, removing any residue from the gout lines.
3)Carry out a state-of-the-art grouting following the layer and technician’s instructions and the technical specifications.

4)Grout small areas of the surface at a time (4mς to 5mς) and remove excess grout with a sponge or a wet cloth (with clean water).

5)Non-added cement grouts: follow the manufacturer’s instructions carefully and at the end of the working day clean the surface with a slightly damp sponge.

6)Epoxy grouts or added grouts (with latex, etc): follow the manufacturer’s instructions to the letter as rapid hardening can lead to difficult cleaning operations, especially in case of anti-slip, rough or textured tiles.

### CLEANING AFTER INSTALLATION

The cleaning after installation is of fundamental importance for all the subsequent steps and for a correct maintenance. Post-installation cleaning using acid detergents with a padding action such as Fila Deterdek or Faber Cement Remover must be carried out only once and only if this would result in the added bonus of giving the surface a more uniform aspect. Acid-cleaning will remove all residue associated with the installation and works in general, such as mortar, adhesive, paint and dirt. It is important to underline that 90% of complaints are due to a bad, or even inexistent cleaning after installation. In order to make sure that an acid detergent used for the cleaning does not compromise the filling of grout lines, it is necessary, before proceeding with cleaning, to wet the floors so that the grout lines are impregnated and protected from the corrosive action of the acid.

It is recommended to follow these steps:

- First, remove any grease or similar substance from the floor using alkaline detergents
- Proceed with the cleaning of the surface
- Rinse the floors with an abundance of water

- The cleaning must be carried out 4-5 days after grouting (the grout must season) and within a maximum of 10 days after grouting, as, beyond this period of time the cleaning can be difficult, carefully follow the manufacturer’s instructions for the use of detergents. It is always recommended to carry out a test on a sample tile (not installed), in particular in case of honed or polished products.

### LAYING AND CLEANING DECORS PRODUCED WITH NATURAL COMPONENTS

#### 3x30 CM. FASCIA SLATE ROSSO / SLATE NERO

The individual elements that make up the decorative piece are cut one by one from slabs of slate of various sizes, all with a thickness of 10 mm. Because they are made of natural stone, they are inevitably subject to surface and thickness irregularities. The decorative piece should be installed using normal ceramic mosaic adhesives and employing the back-buttering technique. Use exclusively epoxy grouts, being sure to remove any excess before it has dried completely. For maintenance and cleaning, use normal commercially-available products designed for marble/natural stone. Do not use abrasive products.

### LAYING AND CLEANING ALUMINIUM STRIPS

#### MATITE ALLUMINIO 0,5X120 cm

Item made of certified pure aluminium and decorated by hand with acrylic resins or in galvanic bath. Slight differences in colour and/or finish are typical of handmade products.

INSTALLATION: use polyurethane or epoxy glues. During installation, where possible avoid all contact between the glue and the surface of the aluminium strip. If necessary, immediately clean off any excess glue from the visible surface using water and a soft sponge. Take great care during grouting and clean immediately using water and a soft sponge.

CLEANING: we recommend using a soft cloth with water and neutral soap, alcohol or neutral household cleaners (do not use acidic or alkaline products).

NOTE: do not under any circumstances (installation, grouting or cleaning) use abrasive, acidic or alkaline products, acetone, solvents or thinners. Do not apply adhesive tape or similar products to the decorated surface.

Pulizia e manutenzione: prodotti

**MANUTENZIONE ORDINARIA**

Si consiglia l'utilizzo di un comune detergente neutro diluito in acqua calda. Evitare l'utilizzo di prodotti acidi, alcalini, ceranti e/o impregnanti.

Nella pulizia ordinaria occorre limitare al massimo l'uso di mezzi abrasivi (ad esempio: paglietta di metallo, spugnette di ferro o acciaio). Questa precauzione diventa un obbligo nel caso di piastrelle con superficie lucida, più esposte ad effetti visibili di scalfitture, graffi. . .

In caso di sporchi più intensi o di superfici particolarmente strutturate, usare un detergente a base alcalina risciacquando al termine del lavaggio.

Nella pratica quotidiana occorre considerare che certi tipi di sporco (polvere, sabbia) aumentano l'effetto abrasivo del traffico pedonale. Cercare quindi di prevenire la presenza di questa tipologia di sporco dall'esterno, predisponendo l'utilizzo di zerbino o stuoino all'ingresso.

Rimozione di patine lucide: prodotti

**RIMOZIONE DI PATINE LUCIDE**

Nei normali detersgenti in commercio sono a volte contenute cere o additivi lucidanti che, lavaggio dopo lavaggio, depositano sul pavimento patine lucide, causa di noiose alonature. Patine di questo tipo possono essere depositate anche da alcuni stucchi per le fughe. Semplici alimenti come Coca Cola, vino, acqua, etc., cadendo sul pavimento tolgono questa patina lucida e ripristinano l'aspetto originale più opaco delle piastrelle. In mezzo al pavimento più lucido, le zone senza cera appaiono come aloni opachi, in realtà sono le uniche parti pulite del pavimento.

In questi casi, dopo aver fatto un test preventivo, bisogna:

- Togliere la patina lucida da tutto il pavimento con un tipo di detergente a base acida.
- Utilizzare per le pulizie quotidiane, detersgenti neutri che non contengono né cere né patine lucidanti.

Pulizia e manutenzione: prodotti

**MANUTENZIONE STRAORDINARIA**

Nel caso di tracce di sporco resistente alla pulizia ordinaria si raccomanda l'utilizzo di un detergen- te adeguato in funzione del tipo di sporco e comunque, prima dell'uso, fare sempre test preventivi su una piastrella non posata. Nella tabella "PRODOTTI PER LA PULIZIA E LA MANUTENZIONE" sono indicati i detersgenti efficaci in funzione del tipo di macchia.

Pulizia e manutenzione: prodotti

**PAVIMENTI E RIVESTIMENTI METALLIZZATI**

Per la pulizia e manutenzione di piastrelle metallizzate si raccomanda di non usare assolutamente detersgenti acidi o alcalini. Usare esclusivamente prodotti con PH neutro come ad esempio Fila Cleaner o Floor Cleaner di Faber. In ogni caso verificare sempre prima il prodotto su una porzione di materiale non posato ed evitare di lasciare il detergente sulle piastrelle per più di 10-15 min. Risciacquare sempre abbondantemente con acqua.

Pulizia e manutenzione: prodotti

**TRATTAMENTO PRODOTTI LAPPATI E LEVIGATI**

Lappatura e Levigatura sono lavorazioni che prevedono sempre l'asportazione di una parte superficiale dello smalto o del corpo stesso della piastrella. In tutti i pavimenti ceramici disponibili sul mercato, tale lavorazione, pur in presenza di materiali vetrosi o a bassissimo assorbimento, può comportare l'apertura di microporosità superficiali che a contatto con particolari tipi di sporco, possono risultare di difficile pulizia o presentare aloni difficilmente rimuovibili.

Pulizia e manutenzione: prodotti

**RACCOMANDAZIONI**

Ricordiamo di non usare mai detersgenti a base di acido fluoridrico (HP) o dei suoi composti, compresi antiruggine o smacchiatori di tipo spray che spesso lo contengono. Il danno che si potrà provocare sarà irreparabile in quanto non esiste pavimento sul mercato resistente a tale acido.

Pulizia e manutenzione: prodotti

**AVVERTENZE**

Le caratteristiche di pulizia dei materiali variano in modo significativo in funzione delle diverse modalità di installazione, condizioni d'uso, tipologie di superfici e ambiente. In linea generale all'aumentare delle caratteristiche di antiscivolosità delle piastrelle, aumentano le difficoltà di pulizia. L'operatore professionale incaricato dell'intervento di manutenzione e pulizia, dovrà sempre procedere ad una preliminare verifica empirica, possibilmente su una porzione di materiale non posato, per ogni singolo tipo di intervento.

In caso di condizioni d'uso particolarmente gravose, di errata installazione o di pulizie effettuate in modo inadeguato FLAVIKER declina ogni responsabilità in merito all'efficacia delle operazio- ni di pulizia e manutenzione. Resta inteso che FLAVIKER non potrà essere ritenuta responsabile per eventuali danni o difetti dovuti ad errata installazione, negligente pulizia e manutenzione o inadeguata scelta della tipologia dei materiali installati e degli adesivi utilizzati con riguardo alla destinazione.

Le indicazioni contenute in questo paragrafo sono puramente indicative. Per notizie più approfondite rimandiamo a documentazione specializzata disponibile su cataloghi e siti web delle principali ditte produttrici di prodotti specifici per la pulizia dei pavimenti.

Pulizia e manutenzione: prodotti

**DAILY MAINTENANCE**

It is recommended to clean the floor using a neutral detergent diluted in hot water. Avoid the use of acid, alkaline, waxing and/or impregnating products.

During ordinary cleaning procedures, it is recommended to limit the use of abrasive means such as scouring pads, iron and/or steel sponges. Taking this precaution is a must on glossy tiles, as they are more liable to scratching.

In case of intense dirt or textured surfaces, use an alkaline detergent, rinsing the floor with an abundance of water.

It is important to underline that certain types of dirt like dust or sand, increase the abrasive effect of foot traffic on the surface. The use of a door mat at the entrance can help prevent this.

Pulizia e manutenzione: prodotti

**REMOVAL OF FILMS ON THE FLOOR**

The standard detergents available on the market sometimes contain waxes or polishing additives that, cleaning after cleaning, create a film on the floor and cause rims. This type of film can also develop when using certain types of grouts. Every-day stains on the floor, such as cola, wine, water, etc. remove this film and reveal the original, more opaque aspect of the tiled surface. On a glossy floor, these areas with no wax appear as rims but, in actual fact, they are the only clean areas of the floor itself.

In such cases, after having carried out a test, it is necessary to:

Remove the film from the floor using an acid detergent.

Use neutral detergents, which do not contain wax or polishing additives for everyday cleaning.

**EXTRAORDINARY MAINTENANCE**

For the cleaning and maintenance to standard cleaning operations, it is recommended to use a specific detergent depending on the type of dirt and, every single time before using such detergent, to carry out a test on a non-installed sample tile. The chart "REMOVE STAINS" indicates the recom- mended detergents that are effective for certain specific stains.

Pulizia e manutenzione: prodotti

**METALLISED FLOOR AND WALL COVERINGS**

For the cleaning and maintenance of metallised tiles, it is recommended not to use acid or alkaline detergents. Use products with neutral PH such as Fila Cleaner or Faber Floor Cleaner. Every single time, test the product on a sample tile that has not been installed and do not leave the detergent on the tiles for more than 10-15 minutes. Always rinse the surface with an abundance of water.

Pulizia e manutenzione: prodotti

**TREATMENT OF HONED AND POLISHED TILES**

Honing and polishing are manufacturing processes that always remove a superficial part of the glaze or of the body of the tile itself. All honed and/or polished ceramic tiles available on the mar- ket have a micro-porous structure that, even when using low absorption vitreous materials, are vulnerable to attack from certain types of dirt that can attack the micro-porous structure and make cleaning operations very difficult.

Pulizia e manutenzione: prodotti

**RECOMMENDATIONS**

Never use hydrofluoric acid-based detergents or its derivatives, such as rust-preventing products or spray stain-removers that often contain hydrofluoric acid. The use of hydrofluoric acid will irre- parably damage the surface, as no ceramic tile floor available on the market is resistant to this acid.

Pulizia e manutenzione: prodotti

**WARNING**

The cleaning features of materials considerably vary depending on the installation pattern, the conditions of use and the type of surface. As a general rule, as the anti-slip value of ceramic tile increases, the cleaning operations become more difficult. The professional technician in charge of the cleaning and maintenance must always carry out a preliminary test on a sample tile that has not been installed before proceeding with any cleaning operation.

In case of special conditions of use, incorrect installation or inadequate cleaning, Ceramiche FLA- VIKER will not be responsible for the effectiveness of cleaning and maintenance procedures. It is agreed that FLAVIKER will not be responsible for any damage or defects that are due to incorrect installation, cleaning and maintenance or due a wrong choice of materials and adhesives.

The above-stated instructions are merely indicative. For in-depth information, please consult the specific documents that are available on the catalogues and web-site of the manufacturers of detergents for ceramic floors.

NUOVI SISTEMI DI IMBALLO

L'innovazione del progetto lastre si esprime anche attraverso la parte logistica del progetto. ABK Group rivoluziona il sistema di imballaggio delle lastre ed è a oggi l'unica azienda che ha portato il sistema a cavalletto impilabile alla dimensione di cm 75x284x147,5 (lastre 120x280) e 75x26x200 (lastre 26x200).

- Questi i principali vantaggi offerti:
- essendo impilabile permette di ottimizzare gli spazi all'interno dei magazzini.\*
  - la profondità di 75 cm consente di sfruttare a pieno il volume di carico del container (3 pallets ne occupano perfettamente la larghezza).
  - Il posizionamento verticale del prodotto garantisce una maggiore protezione delle lastre durante le fasi di trasporto.
  - facilita le operazioni sul cantiere in quanto le lastre si trovano già posizionate in verticale, il materiale è facilmente ispezionabile e removibile per l'installazione.
  - le dimensioni complessive del cavalletto consentono maggiori spazi di manovra all'interno dei locali di posa rispetto alle casse tradizionali e agevolano il sollevamento del materiale mediante mezzi meccanici (gru-montacarichi).
  - è caratterizzato da un sistema di regettatura che consente di liberare anche 1 solo collo alla volta, senza compromettere la stabilità del materiale che rimane sul pallet, evitando così il rischio di rotture. Le lastre dovranno essere liberate rispettando la sequenza opposta rispetto a quella con cui sono state confezionate, quindi iniziando dall'ultimo collo regettato.

NEW PACKAGING SYSTEMS

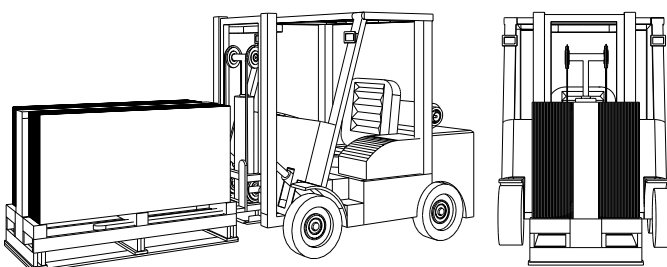

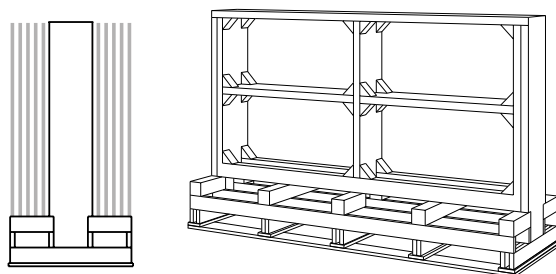

Innovation in the slab's range is also reflected in the project's logistics. ABK Group has revolutionised the packaging of ceramic slabs and is the only company to have expanded the stacking rack pallet system to the 75x284x147,5 (slabs 120x280) e 75x26x200 (slabs 26x200) cm size.

- This has the following advantages:
- stacking optimises the use of space in warehouses.\*
  - the 75 cm depth enables full use of container load space (3 pallets fit perfectly side by side).
  - The vertical positioning of the product better protects the slabs during shipping.
  - it facilitates work on site, since the slabs are already positioned vertically, making the material easy to inspect and remove for installation.
  - the overall size of the rack pallet provides greater space for manoeuvring in the installation area in comparison with conventional crates, and also makes it easier to lift the slabs mechanically (with a crane or lift).
  - the rack pallet system employs strapping which allows the user to remove a single package at a time without affecting the stability of the other packages on the pallet, thus minimising the risk of breakage. The slabs must be released from the packaging by reversing the packaging sequence, i.e. starting with the last package to have been strapped on.
